

Installation Tips for Genesis® Recycled Ceiling Tiles

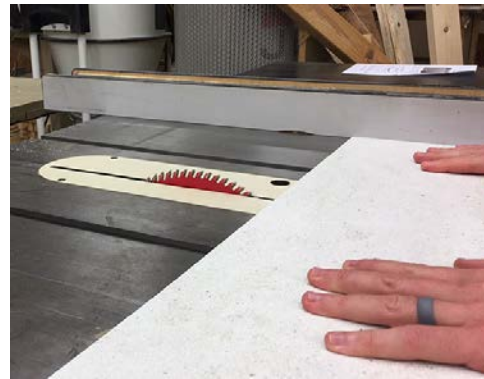

Install tiles into the ceiling grid with the pre-stressed arch facing upward. Tiles will relax into a flat position. Genesis Recycled Tiles can be installed in front of an existing tile to reduce installation time.

Engineered, pre-stressed profile prevents sagging

Cutting Tips

1. Use a table saw or circular saw with a fine-tooth, paneling or finish blade to achieve the cleanest cut.
2. When cutting the tile, place the back of the tile toward the saw to prevent scratching to the room-facing side of the tile, as shown below.

3. Press the tile flat while cutting to prevent chipping.
